

UCAT ANZ Access Arrangements – Colour Scheme and Font Size Options

If you require changes to the colour scheme and/or font size in the UCAT ANZ the following accommodations are available and require approval.

COLOUR SCHEME OPTIONS

At the start of your exam you will be able to select a preferred colour scheme from a dropdown box on the top right of the screen. This can be altered during the exam. The following colour scheme options are available:

- Normal Colour Scheme (black on white with blue borders)
- Black on White
- Black on Light Yellow
- Black on Yellow
- Black on Salmon
- Blue on White
- Blue on Yellow

Screenshots of the colour scheme options are shown on pages 4-10 of this information sheet.

You should be aware that due to the nature of the UCAT ANZ exam there are limitations when applying a different colour scheme:

- The UCAT ANZ test contains information presented in visual form (e.g. images, diagrams, charts, graphs, etc.). Applying a different colour scheme will not change the colour of these and the majority of them will still present in black and white. This affects the Decision Making and Quantitative Reasoning subtests. In particular you should note that:
 - In Decision Making the answer options for items that use drag and drop functionality remain black on white.
 - Visual information in Quantitative Reasoning generally remains black on white.
- The calculator does not change colour.

UCAT ANZ Access Arrangements – Colour Scheme and Font Size Options

FONT SIZE OPTIONS

At the start of your exam you will be able to select a preferred font size from a dropdown box on the top right of the screen. This can be altered during the test. The following sizes are available:

- Normal font (Arial 11pt)
- 125%
- 150%
- 175%

Screenshots of the font size options are shown on pages 11-14 of this information sheet.

You should be aware that due to the nature of the UCAT ANZ exam there are limitations when applying different font sizes:

- The resolution of information presented in visual form (e.g. images, diagrams, charts, graphs, etc.) may not be as sharp.
- Increasing the magnification often results in the item being larger than the screen size. There may be a scroll bar to the right and/or the bottom of each pane of information. A pop-up notification will appear to alert you if there is unseen content. You will be prevented from moving on until you have scrolled to view all of the information on the screen (all panes). Specific details can be found under each subtest.
- You may need to scroll down to view all the questions in the review screens.

Verbal Reasoning

Verbal Reasoning items are presented in two vertically split panes with the passage on the left and the question and answer options on the right.

Any level of magnification in this subtest results in scroll bars appearing on the left pane and on occasion the right pane. Magnification of 175% results in scroll bars on both panes.

UCAT ANZ Access Arrangements – Colour Scheme and Font Size Options

Decision Making

Decision Making items are usually presented in a horizontal format with the question above the answer options. At some magnification levels you may see scroll bars appearing.

We advise that any magnification above 125% may be problematic for items that use drag and drop functionality as you will not be able to view all the information easily.

Quantitative Reasoning

Quantitative reasoning items are presented in a horizontal format with the question above the answer options. At some magnification levels you may see scroll bars appearing.

The calculator does not increase in size.

Situational Judgement

The majority of Situational Judgement items are presented in two vertically split panes with the scenario on the left and the question on the right. At some magnification levels you may see scroll bars appearing on the left pane and on occasion the right pane. This subtest now includes items that use drag and drop functionality. We advise that any magnification above 125% may be problematic for these items as you will not be able to view all the information easily.

PRACTICE MATERIALS

Unfortunately it is not possible for us to replicate this functionality in our practice materials.

NOTE: *The examples that follow are indicative of the colour scheme and font size options available in the UCAT ANZ exam.*

PROBLEMS DURING TESTING

You have 2 minutes to read this screen. Please take time to read this screen as it includes important information about what to do if you have a problem during your test.

- If you become **ill**, raise your hand to notify the invigilator. If you are not well enough to continue, please ask to end your test. You then need to contact the UCAT Office as soon as possible. **If you choose to continue testing, UCAT will not normally take any action.**
- If you experience **hardware/software problems, noise disturbance or other distractions**, you must raise your hand immediately to inform the invigilator. **If a problem is not reported during your test, UCAT will not normally take any action.** The invigilator cannot answer questions about test content.
- If you find shortcut keys do not work, use your mouse to navigate through the test.
- If you experience a problem with the onscreen calculator, try these troubleshooting tips:
 - Ensure that 'Num Lock' is on for the number pad to work.
 - Most calculator problems can be resolved by clicking the ON/C button or closing the calculator and relaunching.
 - Use your mouse instead of the keyboard keypad to operate the calculator.

Please click the **Next (N)** button to proceed before the time on this screen expires.
